ANKIT SINGH

ankitsingh94932@gmail.com — +91-9335113650 — LinkedIn — GitHub — LeetCode

Education

United College of Engineering & Research, Prayagraj *2023 – 2027*
Bachelor of Technology in Computer Science and Engineering

M.P. Memorial School, Varanasi *CBSE*
Class XII: 72.2% (2022) — Class X: 74.4% (2020)

Technical Skills

Languages	C++, Python, Java, JavaScript, SQL
Web Development	Node.js, Express.js, MongoDB, Mongoose, Socket.io
ML / AI	scikit-learn, XGBoost, SHAP, Hugging Face Transformers, Streamlit
Developer Tools	Git, GitHub, VS Code

Experience

Data Science Intern – EISystems Technologies Jul 2026 – Aug 2026
Prabandhan'26, IIT Kanpur

- Worked through an end-to-end ML workflow including data cleaning, EDA, feature engineering, model training, and evaluation using Python.
- Built a Customer Churn Prediction classifier on 7,043 telecom records and deployed it as an interactive Streamlit application.

Generative AI Intern – IBM Jul 2025 – Aug 2025

- Explored Generative AI, Large Language Models (LLMs), and prompt engineering through hands-on AI workflows.
- Worked with text generation and prompt optimization techniques for practical LLM-based applications.

Java Programming Intern – IIT Kanpur Aug 2024

- Completed hands-on Java and OOP training and solved 50+ coding problems focused on logic building, arrays, and OOP implementation.

Projects

TraceTag – QR-Based Lost & Found System *UHACK 4.0 Hackathon*
Node.js, Express.js, MongoDB, Mongoose, Socket.io, JWT

- Led backend development for a team-built system where registered items receive unique QR stickers enabling anonymous communication between finders and owners.
- Designed an anonymous identity model using browser-stored random IDs with server-side verification on every chat message to prevent conversation spoofing.
- Implemented real-time room-based messaging with Socket.io, typing indicators, per-socket rate limiting, and JWT-authenticated REST APIs with role-based middleware.
- Built admin moderation features for user suspension, QR disabling, and flagged-chat review; secured authentication using bcrypt and global API rate limiting.

Customer Churn Prediction Web App
Python, scikit-learn, XGBoost, SHAP, Streamlit

- Built an end-to-end churn prediction system on 7,043 telecom records, comparing Logistic Regression, Decision Tree, Random Forest, and XGBoost.
- Achieved 0.847 ROC-AUC and 74.3% recall by tuning the classification threshold using out-of-fold predictions for the imbalanced dataset.
- Created a reusable scikit-learn Pipeline for preprocessing and serving, with batch CSV prediction and SHAP-based churn explanations in Streamlit.

Certifications & Achievements

- Data Science Internship Certification – EISystems Technologies / Prabandhan'26, IIT Kanpur
- Generative AI Certification – IBM
- Java Programming Certification – IIT Techkriti
- Python Programming Certification – HCL GUVI
- UHACK 4.0 Hackathon – Led backend development for TraceTag
